# Synergy TintSTAT

- Point-Of-Sale statistic analysing software

The Synergy TintSTAT software analysis collected statistics from different tinting systems at your selling points, one by one or multiples, in an user-friendly environment.

Today dispensing machines are used all around the world. The mergers between companies, spread in different parts, create a demand for the easy analysing of data, e.g. colorant usage and product requirement as a help for planning in production and marketing.

Within a company group often different types of dispensers from several suppliers are used, a mixture of automatic, semi-automatic and manual. This situation creates time consuming routines for reports of usage which easily will be solved by using the Synergy TintSTAT to analyse statistics collected from LargoTint 2000 and Synergy T3 recipe and dispense management software.

The results of the retrieved statistic can be exported to Microsoft Excel for further analyses or it can be shared with the users and other departments or stakeholders.

Users	Products	Shades
100	45V180/325	Nery Palaz
100	268/009/247	Gulf Blue
100	10V130/295	Light Topaz
100	50500-V108	NCS Edition II - 1995

Both LargoTint 2000 and Synergy T3 can be set to retrieve statistic over tinted colours by can or volume, usage of colorants etc via e-mail, internet or disc. This will also give the paint manufacturer and their marketing department an overview and awareness of trends in colour choices.

when colour counts
